## Changing decimals to percentages using fractions

There are many ways to change decimals to percentages. You can use fractions to help you make the conversion.

Example: what is 0.75 expressed as a percentage?
Put the decimal in a place value table:

| Tens | Units | $\cdot$ | Tenths | Hundredths | Thousandths |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 10 | 1 |  | $\frac{1}{10}$ | $\frac{1}{100}$ | $\frac{1}{1000}$ |
|  | 0 | . | 7 | 5 |  |

Look at the decimal shown above, 0.75 . In the table we can read this as 0 units, $\frac{7}{10}$ and $\frac{5}{100}$.
We can also read the figures after the decimal point as one number - seventy five. Combine this with the heading of the last column that contains a number. With the decimal 0.75 the last number 5 is in the hundredths $\left(\frac{1}{100}\right)$ column. The decimal 0.75 is the same as the fraction $\frac{75}{100}$.

To convert this to a percentage, remember that percent means 'out of 100'.
$\frac{75}{100}$ means 75 out of 100 , which is exactly the same as $75 \%$.
Here are some more examples:

| Tens | Units | . | Tenths | Hundredths | Thousandths |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $\mathbf{1 0}$ | $\mathbf{1}$ |  | $\frac{\mathbf{1}}{\mathbf{1 0}}$ | $\frac{\mathbf{1}}{\mathbf{1 0 0}}$ | $\frac{\mathbf{1}}{\mathbf{1 0 0 0}}$ |
|  | 0 | . | 3 | 0 |  |
|  | 0 | . | 0 | 6 |  |
|  | 0 | . | 1 | 2 |  |
|  | 1 | . | 0 | 0 |  |

The decimal 0.3 is $\frac{3}{10}$, which is the same as $\frac{30}{100}(30$ out of 100$)=30 \%$.
The decimal 0.06 is $\frac{6}{100}(6$ out of 100$)=6 \%$.
The decimal 0.12 is $\frac{12}{100}(12$ out of 100$)=12 \%$.
The decimal 1 is $\frac{1}{1}$, which is the same as $\frac{100}{100}(100$ out of 100$)=100$.
